It's a beautiful, sunny summer day. A great day to sit out on your patio and relax, but there is a problem, it's just too hot. You long for just a little shade. There is a solution for this problem. Build a pergola. A pergola is a wonderful addition and is an ideal structure to compliment any deck, patio, or garden. It provides a sense of place and privacy, yet give a feeling of openness to your surroundings.

A pergola can be attached to your house, sit adjacent to it, or be a free standing structure. When designed properly, it can be a real focal point of any landscape design. You can hang potted plants from it, or allow vines to climb and intertwine with the joists to create a beautiful relaxing setting. A pergola makes a nice outdoor "room" to sit and enjoy your landscape, or simply relax and read a book in the shade.

Now that you've decided on a pergola there are a few things to consider. Do you want to build it yourself, or hire someone to build it for you? A pergola is a great DIY project, most can be built in a weekend. If you would prefer to have someone build it for you we can put you in contact with a contractor who is experienced in pergola construction.

We recommend vinyl to build your pergola. The low-maintenance nature of vinyl means you'll spend more time enjoying your pergola, and less time with costly upkeep that's typical of other material. When necessary we use treated wood, steel, or aluminum in the posts, beams and joists of our pergolas. This structural material is covered in vinyl and not seen, but is a necessary component in the construction of a well built pergola. The size, location, and intended use dictate when these materials are necessary. All the hardware (nuts, bolts, screws, etc.) are stainless steel. Schmidt Fence & Deck recommends consulting with your local building code officials before starting any project. Also call Diggers Hotline before doing any type of excavation.
